

 **FABRICWALL**
Stretch Fabric Systems

Customizable | Tackable | LEED-Conscious Materials

Since 2006, FabricWall has helped designers and contractors turn acoustical challenges into seamless, fabric-wrapped solutions. Our stretch fabric system is built on-site to fit your exact needs—bringing custom sound control and a clean finish to walls and ceilings alike.

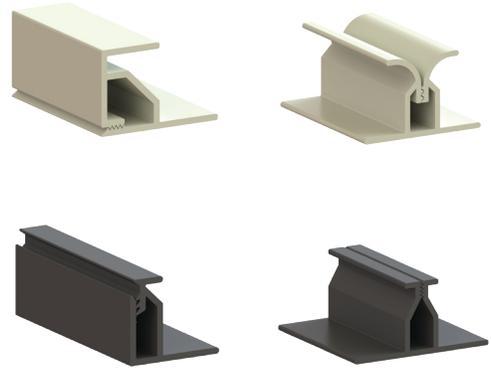

With tested cores, flexible track profiles, and a wide range of fabric options, FabricWall delivers tailored performance for any space. Installers can join our growing network to bring FabricWall to more projects.

TRACK

The foundation of the system, FabricWall's track holds fabric in place with clean, consistent tension. Available in multiple depths and edge profiles, our track blends into the background—or makes a subtle statement. Choose the look and fit that works for your space.

With four depth options—1/2", 5/8", 1", and 2"—our track system adapts to varying project requirements. Standard tracks are white, with black also available for contrast or concealment.

CORE

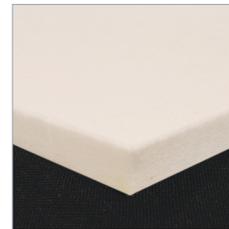

Beneath the fabric, the acoustical core does the heavy lifting. Whether your goal is maximum sound absorption or tackability, our tested cores deliver performance without compromise.

Each tested for durability, performance, and design flexibility to meet the specific needs of your space:

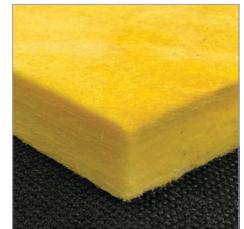

FWPOLY Polyester
1", NRC = .75
2", NRC = .95

FWATF Tackable Fiberglass
1", NRC = .80
2", NRC = 1.00

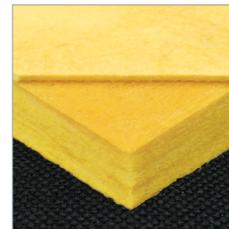

FWAP Fiberglass
1", NRC = .80
2", NRC = 1.05

FWPOLY - Polyester

FWAP - Fiberglass

FWATF - Tackable Fiberglass

FABRIC

All fabrics used in the FabricWall system are tested to ensure a clean fit, lasting tension, and wrinkle-free performance.

Choose from our curated selection, any fabric supplied through FabricWall is tested before installation.

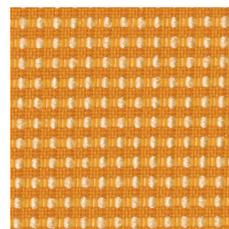

Custom prints and extra-wide fabrics up to 125" are also available, giving you full creative control.
